DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/19/06 has been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Fenimore et al (US Patent No. 5,329,966).

Fenimore et al discloses a system for delivering gas at a predetermined rate of flow, comprising: a flow controller having a flow sensor (see Col 1 lines 60-67), a diaphragm forming upstream and downstream chambers (Figure1 element 13 and 20); a regulator for delivering gas to the upstream chamber of the flow controller at a substantially constant pressure (element 16), said controller having an outlet from the downstream chamber which is opened and closed by the diaphragm (element 14); an urging means for urging the diaphragm toward its closed position (element 16); and a valve for selectively adjusting the spring force to achieve the predetermined

rate of flow without having to use a gas flow measurement device to monitor the flow rate (element 18), a controller and a regulator are contained in a single housing (Figure 3), a heating element for maintaining the gas in said system at a substantially constant temperature (Figure 2 element 38), a valve includes a stepper motor (Figure 2 element 40), an urging means (Figure 1 element 16) is a spring and the gas in the system is maintained at a substantially constant temperature (Col 4 line 19-21).
